

The FOCuS codebase nightmare

Hi Dan,

So I thought it was a good idea to give directly the repo under the table.

If there's the repo link, it means that the code was written and on github. I have referenced all the scripts where the code was made.

Recall that the color coding shows the line-by-line equivalents. All links point directly to the file where the main "update" function is defined, e.g. the one that does the focus iteration.

	Algorithm	Pure R	Pure Python	C++ (w\ Rcpp interface)
Romano & al. (2023) (jmlr) - on github	FOCuS (inters) w\ grid approx	gtromano/FOCuS-R-prototype		gtromano/FOCuS
	FOCuS (Melk)	gtromano/exfocus	gtromano/exfocus-python	gtromano/FOCuS
	R-FOCuS (inters) w\ grid approx	gtromano/FOCuS-R-prototype		gtromano/FOCuS
Ward & al. (2023) (arXiv)	Ex-FOCuS (Melk)	gtromano/exfocus	gtromano/exfocus-python	gtromano/focus.new
Romano & al. (2023) (arXiv)	NP-FOCuS (Melk)	gtromano/NPFOCuS-Rprototype	TBC	gtromano/focus.new

I am really really sorry but the original codebase is a mess. I started working on FOCuS on the summer of my PhD, hence the 50 different versions. You should have therefore received 6000 GitHub invitations.

History of the versions:

1. **The yellow** is the original codebase that went into the development of the original focus paper
 - a. First written in R as a prototype
 - b. translated directly into c++
2. **The red** is a version I had to write in c++ to speed up the original focus, as people were using the package and it wasn't fast
3. The **light blue** is the last iteration of focus, coming after exfocus. I have written it
 - a. First in R, then
 - b. Translated into c++
 - c. Translated then into Python (This is the latest and greatest)

The last version I wrote, that should be the generalised one, color coded in light blue, is in [focus.new](#) (c++) and [exfocus-python](#) (pure python). **You might want to start looking there, the [python version](#), maybe focusing on the gaussian case.**

As for NP-FOCuS, unironically the cleanest version I have it's in c++, under focus.new. I will clean the python version and upload it to exfocus-python. You'll note this is just a wrapper around exfocus, as mentioned.

Best,
Gaetano
